U.S. Patent No. 6,520,366, issued on February 18, 2003 to Bradley et al., teaches a beverage container holder which includes a single-cup beverage container holder, a dual-cup beverage container holder, a three-cup beverage container holder and four-cup beverage container holder. The container holders are characterized by at least one container cup and a handle attached to the container cup. The handle is hollow and serrated to facilitate the non-rotatable nesting of the handles of two or more of the beverage container holders in either a stored or functional configuration. The various configurations of the container cups on the handles facilitate selective positioning of the container cups of multiple nested beverage container holders so as to enable an individual to carry a selected number of beverages using one hand at the nested handles.

U.S. Patent No. 6,131,732, issued on October 17, 2000 to Schneider, describes a foam drink tray having improved cup cavities. This tray has a foam base with at least two cup cavities disposed in a top thereof. At least one hand cavity is formed in a top thereof for the retention by a hand. The side wall of each cup cavity is shaped in several different ways. Each side wall surface which contacts the cup or can is chamfered where it meets the top of tray.

U.S. Patent No. 5,971,167, issued on October 26, 1999 to Finbow, teaches a holder for stemmed drinking vessels. This holder has a base and a bowl connected by a stem. The holder has a support structure and vessel supports are disposed on the support member to support a plurality of vessels with their stems crossed. The support structure is formed symmetrically about an axis to define an interior space for receiving the vessels.

U.S. Patent No. 5,971,139, issued on October 26, 1999 to Bradley, teaches a food and beverage tray. This tray includes a plate section that has a planar inner section that is surrounded by a raised lip. A cup holder, for holding a beverage container, is attached to the plate section by an intermediate section. A hand grip extends downwardly from the intermediate section. The hand grip is hollow and provides space for tableware and condiments. The hand grip has a plurality of serrations to facilitate gripping the hand grip. A plurality of supports extend downwardly from the plate section to provide additional support to the plate section when the food and beverage tray is placed upon a supporting surface. The supports are placed apart so as to extend downwardly on opposite sides of a person's arm when the food and beverage tray is held.
